SECTION 2, SUBJECT INDEX

This subject index follows the format of the National Library of Medicine's *Index Medicus*. Some additional headings have been added.

Entries take this form: Volume and number, author, first page of article. For example, **4:4 Keehn 499** refers to J. D. Keehn's "Psychological Paradigms of Dependence," found in Volume 4, Number 4 on page 499. From this section of the index, reference may be made to Section 1 for the full title and authors of a particular article.

All original contributions to the *International Journal of the Addictions*, Volumes 1 through 4, are indexed. Book reviews, abstracts, and communications have not been included. Nor have two bibliographies been analyzed: **3:1 Kupperstein 177** "A Bibliography on the Inhalation of Glue Fumes and Other Toxic Vapors—A Substance Abuse Practice Among Adolescents," and **4:2 Pearlman 249** "Drugs on the Campus—An Annotated Guide to the Literature."

Four types of cross reference are used:

X	See
XU	See under
XR	See also related
XS	See also specific

The "See" reference directs from a synonym to the term appearing in the subject list. "See under" is used to refer from a specific term not in the list to a more general heading under which it is indexed. The "See also related" reference is used to indicate related terms containing citations of direct pertinence to the area of interest. "See also specific" indicates that subdivisions of the subject are indexed individually.
